Modena, Italy, 1959.

The following countries competed in the above competition:-

Italy, Spain, Germany, England, Portugal, Belgium, Switzerland, Luxembourg and Ireland!

The following table shows the list of first places for the different countries:-

Spain	io			*	
Italy	io				
Engla nd	5	(two	joint	first	places)
Íreland	4	(two	joint	first	places)
West Germany	4	(one	jäint	first	place)
Belgium	. 2		1.4		
Luxembourg	1	(a j	oint f	irst p	lace)
Portugal	i		. A#		
Switzerland	. 0				

The large number of first places obtained by Italy and Spain is accounted for by the fact that they had more entries for the different tests than the other countries e.g. Italy 31; Spain 28.

It is interesting to note that England had 23 candidates, Belgium 19, Germany 15 as against 14 for Ireland.

All the Irish Competitors completed their tests and the final result was very satisfactory.

In comparing our results with those of other countries it should be remembered that the metric system of measurement and machines, such as lathes, that are graduated in the metric system must be used by all competitors. Electricians must work with Bergman and plastic tubing whereas in Ireland steel tubing only is used in that trade. Considering these handicaps the Frish team deserve commendation for the excellent results obtained.

It should also be remembered that in most of the continent continental countries extensive tests of apprentices are held on a national scale before the representatives of the country are selected. It is understood that selection was made from more than 20,000 apprentices in Spain for the 1959 competition. The organisation of apprenticeship in west Germany and in Portugal is such that a very wide selection of talent is available. The results must, therefore be viewed against the very restricted field from which apprentices can be selected in Ireland,
