

## XIV INTERNATIONAL APPRENTICE COMPETITION

### Instructions to contestants

To ensure that everything runs smoothly, contestants are issued with the following general rules giving them details of how the tests are organized.

1. The Technical Committee will allow you a certain time in which to study your drawing. Study it carefully. If you do not understand the wording on the drawing and if there is no separate sheet giving instructions in your own language, please ask for a translation. At no time must you take the drawing away from the workshop; at the end of each day's work you are to hand it to the Technical Representative in charge.
2. Try to be present when lots are drawn for materials, working bench and equipment etc. and get acquainted with the layout.
3. Do not start your work until asked to do so. Your times will be noted by the Technical Representative of your particular trade. If you wish you can look at his notes and see how long you are taking to do your work.
4. Your entry will be given a number. Check this constantly. You must make sure that all parts of your work are marked with this number.
5. Check your materials carefully before starting work - this may save you from making mistakes.
6. If you have not brought enough tools or measuring instruments you may ask for more and they will be given to you immediately.
7. Compare your measuring instruments with those of the Jury who will be judging your work.
8. While you are in the workshop do not speak with anyone unless he is a member of the Competition Organizing Committee.
9. If you spoil any of your materials ask the Technical Representative of your trade for more and he will get them for you.
10. Study the marking scheme and arrange your working time to coincide with the maximum time you are allowed to finish the work.
